## OUR TEAM

## PROBITAS IN THE MEDIA

*Potes Amigues, TV Girona*

**Probitas focuses its efforts on supporting vulnerable groups to achieve a better quality of life and promote their opportunities.**

**Dr. Anna Veiga**  
**Probitas Foundation Executive Director**

In 2024, we have consolidated our own projects. Locally, we have worked on professional training, innovation, and program impact evaluation. Internationally, standout projects include the fight against Chagas disease and the ARIS program.

*Peru, Echinococcosis*

*Healthy Project, Valencia*

*Bolivia, Chagas*

# Probitas Foundation in 2 Minutes

Discover Our Programs

## Probitas FAQs

-  **What is the mission of Probitas?**  
We work to improve the health and well-being of people in situations of vulnerability and/or social exclusion.
-  **Where does Probitas operate?**  
We work both locally in Spain and internationally, in regions of Africa, Latin America, and Asia, supporting global health projects.
-  **What are the main goals of the local program?**  
At the local level, we focus primarily on education for health, training for professional, and research.
-  **And the international program?**  
Our international program focuses on strengthening laboratories, fighting Neglected Tropical Diseases (NTDs), and conducting research.

# 2024 Agenda Probitas Foundation

## January

- “Potes Amigues” ongoing implementation in Figueres
- Presentation of the new “Dinem Junts!” setting in Montornès

## February

- Launch of the “Una Sonrisa Más” scholarship program in Guatemala
- Launch of the new Probitas website

## March

- Renewal of the collaboration agreements with Salut Mental Catalunya and the Barraquer Foundation
- Field visit to El Salvador for the Leishmaniasis project

## April

- Field visit to Chemolingot, Kenya, for surgeries and training
- Publication of the new guide “Benestar emocional i salut mental en adolescents i joves”

## May

- Field visit to Kenya to visit the new laboratory at the Kolowa Health Center
- Ophthalmological and optometric examinations in “Dinem Junts”

## June

- Presentation of the “Capacita’t” project at the “I Congreso Nacional de Avances en la Intervención Psicológica en Crisis y Emergencias”
- Field visit to Bolivia for the Chagas disease project

## July

- 2nd edition of the SEMTSI-Probitas scholarships
- New edition of the “Capacita’t pel benestar emocional d’adolescents i joves” training

## August

- New edition of the summer activities “Estiu per a tothom”
- Training of 20 young people at the “Escuela de la vida” in Senegal

## September

- Launch of “Potes Amigues” in 2 new schools
- Presentation of the results from the Healthy project at the “III Congreso Catalán de Enfermería y Salud Escolar”

## October

- Presentation of the “Dinem Junts!” Montornès study results
- Participation in the “Sociedad Española de Medicina Tropical y Salud Internacional (SEMTSI)” Congress

## November

- Signing of the agreement and initiation of the “Saber i Salut” project in Terrassa
- New laboratory in Kenya

## December

- Field visit to Peru for the Echinococcosis project
- Attendance at the “Debate Europa Social 2024 del Hub Social”

# Local Program

# Local Program

**10,000** minors  
**37** municipalities in Catalonia  
**11** in other regions

- 📖 Education for Health
- 🍎 Nutritional resources and balanced diet
- 🎒 Educational leisure
- 👤 Support and guidance for vulnerable children
- 🧠 Training and research

## Spain, one of the EU countries with the highest rate of child poverty

Source: "Informe UNICEF España · Pobreza infantil en medio de la abundancia"

We promote **healthy habits**, offer **socio-educational resources**, and create **safe spaces** for children and youth in vulnerable situations.

# Education for Health

We provide knowledge, strengthen skills, and promote values so that vulnerable children and youth can improve their physical, mental, and social well-being.

- We promote healthy habits
- We inform and raise awareness about sexual health, visual health, cybersecurity, and civism...
- We educate in values: autonomy, responsibility, respect...
- Reduction of inequalities: access to nutritional, educational, and leisure resources...

## Our programs:

Dinem Junts!

Child Nutrition Support

School Health

Potes Amigos

## Dinem Junts!

With the shortened school day in secondary schools, minors are not guaranteed a nutritious meal each day or a socio-educational safe space in the afternoon. The “Dinem Junts!” program meets these needs, providing meals, educational resources, and healthy habits to vulnerable youth.

**470** adolescents during the 2023/24 school year

The program includes **15 groups** in 10 municipalities in Catalonia and 1 in Huelva.

Much more than a balanced plate...

### What does a typical day in “Dinem Junts!” look like?

-  At lunchtime, we have a healthy and balanced meal in the classroom
-  We brush our teeth and learn hygiene habits
-  We carry out physical, sports, and recreational activities
-  We get help with school homework
-  We also go on field trips...

### Study “Evaluation of the Dinem Junts Program – Montornès”

**Confirmed significant impact on youths’ lives**

Activities foster **cohesion, socialization**, expression, **decision-making**, and a sense of belonging. The study, led by Elisabeth Arnaldo from Probitas, also highlights the importance of **inter-institutional collaboration**.

## Child Nutrition Support

# 9,100

children in the 2023/24 school year

Balanced nutrition, lack of sleep, screen overuse, and school absenteeism are current issues affecting children.

Through our Child Nutrition Support programs, we work to meet these needs and enhance the holistic development of children.

### School Meal Grants

The “School Meal Grants” program aims to improve the nutrition and healthy habits of preschool and primary school students in vulnerable situations. We guarantee one balanced meal a day in the school canteen, enabling children to participate in the full school day and ensuring access to learning.

### A Berenar!

Socio-educational organizations that offer after-school activities play a key role in the holistic development of children in vulnerable situations. We provide financial support to these organizations to purchase fresh, locally sourced food in order to offer a healthy afternoon snack to the boys and girls.

## Estiu Per a Tothom

During school holidays, children in vulnerable situations are not guaranteed a healthy meal per day or access to socio-educational resources and leisure activities. During this period, families at risk of social exclusion face difficulties in accessing **educational leisure opportunities**.

With “Estiu Per a Tothom”, we guarantee one healthy meal per day and offer recreational, educational, sports, and cultural activities throughout the summer, in collaboration with local councils and community organizations.

In 2024, more than **4,700 vulnerable children and young people** were able to enjoy a few days of shared experiences with other peers their age in a protected environment across 24 municipalities.

## A Healthy Summer

-  We get to eat a healthy, balanced meal every day.
-  We learn good healthy habits—like washing our hands, brushing our teeth, taking screen breaks, and staying active.
-  We go on fun trips and do all kinds of cool activities to explore the world around us.
-  Sometimes we head to the beach or just enjoy some fun and games.
-  We make new friends and feel better!

## School Health

**370** young people

The acquisition of healthy habits during childhood is essential for a child's development. Through our school health programs, we promote Health Education in educational centers, providing resources, expanding opportunities, and working in collaboration with local authorities, educational teams, and families.

### Healthy Program

**6,295** school nursing interventions

**136** Education for Health workshops

Through the role of the school nurse at Santiago Apóstol School in Valencia, we offer Education for Health workshops, promote physical activity and sports, as well as a balanced and high-quality diet. The objective is to improve the overall health of the students and build a network involving families, teachers, and non-teaching school staff.

### Healthy Study: 13.2% reduction in the obesity and overweight rate

Experts from the University of Valencia, in collaboration with the University of Barcelona, developed this study for the Probitas Foundation to assess the impact of the Healthy project, evaluating its effectiveness, identifying areas for improvement, and its potential for replication in other schools. It provides solid scientific evidence, and the initial results were presented at the "III Congrés Català d'Infermeria i Salut Escolar."

## Saber i Salut

We help children and adolescents in vulnerable situations build a healthier future and improve their well-being through the intervention of a nurse in non-formal educational settings.

This healthcare professional is responsible for leading educational activities such as workshops, group dynamics, and talks. Topics covered hygiene, emotional management, affective-sexual education, first aid, and bullying prevention, among others. The program is carried out in collaboration with the Terrassa City Council and local social organizations.

## We launch a pilot program in Terrassa

-  In 2024, we launched the 1st edition in **Terrassa**.
-  The program is carried out in a non-formal educational setting, benefiting more than **50 adolescents** aged 12 to 14 during the 2024/2025 school year.
-  We continue to support initiatives that promote **equity in health and education**, fostering the physical, emotional, and social well-being of children and adolescents.

## Potes Amigues

**80** boys and girls

Educational intervention with dogs in the early stages of childhood shows that they become a social catalyst, while also modulating behavior, improving integration, and supporting emotional and social development. They also contribute to improve self-confidence, attention, safety, and the predisposition to learning.

### Intervention in schools of maximum complexity

In this 2024/25 school year, the project has been implemented in the high-complexity schools Salvador Dalí and Anicet i Pagès in Figueres. The sessions are conducted by a specialized social educator and have involved more than 80 boys and girls from the I5 (Kindergarten) class.

### “Potes Amigues” study, in collaboration with Vall d’Hebron Hospital

We are collaborating with the Psychiatry Department of the Vall d’Hebron Institut de Recerca (VHIR) to conduct a study on the impact of the “Potes Amigues” project on children’s social and emotional skills.

## Mirem per tu

77 adolescents

In collaboration with the Barraquer Foundation, we have provided **free ophthalmological and optometric check-ups** to 77 young people from the “Dinem Junts!” groups in Santa Coloma and L’Hospitalet to improve their visual health and promote equal opportunities.

### Doctors and optometrists assess the visual health of minors

In 2024, we identified 20 cases of vision difficulties and coordinated referrals to an optician, providing partial funding for the cost of glasses.

## Social Mentoring

4 families

Through the Meraki – Mentoring with Families project, we collaborate with the Resilis Foundation to **improve healthy habits** and promote **autonomy among families in vulnerable situations** through social mentoring.

### We connect families to promote well-being and foster self-reliance

Mentor families offer support to mentee families through weekly meetings and guidance in areas such as nutrition, leisure time, and access to social resources.

# Training and Research

In order to increase the impact of our programs, we design training projects for professionals working with children and adolescents in vulnerable situations and provide support for studies that offer scientific evidence on the various issues affecting their well-being.

- We train and educate professionals
- We develop prevention and health promotion materials
- We conduct studies and collaborate on research projects

PEM – Professionals en Ment

## Professionals en Ment (PEM)

The **“PEM” Project** is a psychoeducational intervention program implemented in collaboration with the Vidal i Barraquer Foundation. It aims to improve the emotional well-being and mental health of professionals who support, educate, and emotionally sustain minors in situations of vulnerability and/or social exclusion through mentalization. Its approach is preventive and focused on enhancing well-being.

Through training and group sessions, it allows them to reflect on their experiences, their relationships with minors, and the challenges in the work environment, creating safe spaces where they can share concerns and find solutions together.

In 2024, we conducted a pilot test, implementing “PEM” in the socio-educational field. The Marianao Foundation highlights the program’s benefits:

- Improves professionals’ emotional well-being
- Improves communication
- Greater team cohesion and trust
- Continuous improvement of intervention
- Creation of a safe space for reflection

## Capacita't pel benestar emocional d'infants, adolescents i joves

**60** participants

At Fundació Probitas, we aim to promote training and capacity-building in the field of mental health for professionals and families who support children, adolescents, and young people in situations of vulnerability and/or social exclusion who experience emotional distress. We collaborate with the "Federació Salut Mental Catalunya" on training initiatives open to all families and professionals who do not work in specific mental health services. Since the program's launch in 2022, 248 people have been trained.

### Enhancing emotional well-being

By improving professionals' educational skills and training, we can prevent emotional issues or mental health problems from escalating, offer better support to children, adolescents, and young people, enhance their quality of life, and contribute to their overall well-being.

4 editions held in 2024

Knowledge in community mental health

We provide support tools, reflection spaces, and group dynamics

Strategies for care and self-care

### A training that offers spaces for reflection

The *Capacita't* training places special emphasis on the importance of having tools to act and respond to crisis situations among adolescents, such as self-harming behavior, isolation, substance use and abuse...

We presented the "**Capacita't**" project at the "I Congreso Nacional de Avances en la Intervención Psicológica en Crisis y Emergencias", organized by the *Universitat Oberta de Catalunya* (UOC) and the *Sistema de Emergencias Médicas* (SEM), as a good practice in mental health prevention and promotion.

## Mental Health Guides

**2,109** downloads  
in 2024

This year, the **“Guía de apoyo. Por el bienestar emocional de adolescentes y jóvenes”** was published, offering recommendations for promoting emotional well-being and providing support.

It includes five educational infographics based on the international **“Psychological First Aid for Mental Health”** program, with recommendations for acting in mental health crisis situations among adolescents and young people (such as anxiety, substance abuse, and suicidal ideation), and for fostering self-care among professionals and families.

The guide was developed together with **Salut Mental Catalunya**, in collaboration with the **Unitat de Trauma Crisi i Conflictes - Universitat Autònoma de Barcelona** (UTCCB-UAB).

**Want to learn psychological first aid for adolescents?**

**Download the guide**

# International Program

# International Program

**4,500** million people  
still lack access to essential healthcare services.

**50** countries  
have succeeded in eliminating at least one neglected tropical disease.

Click  
to play the video!

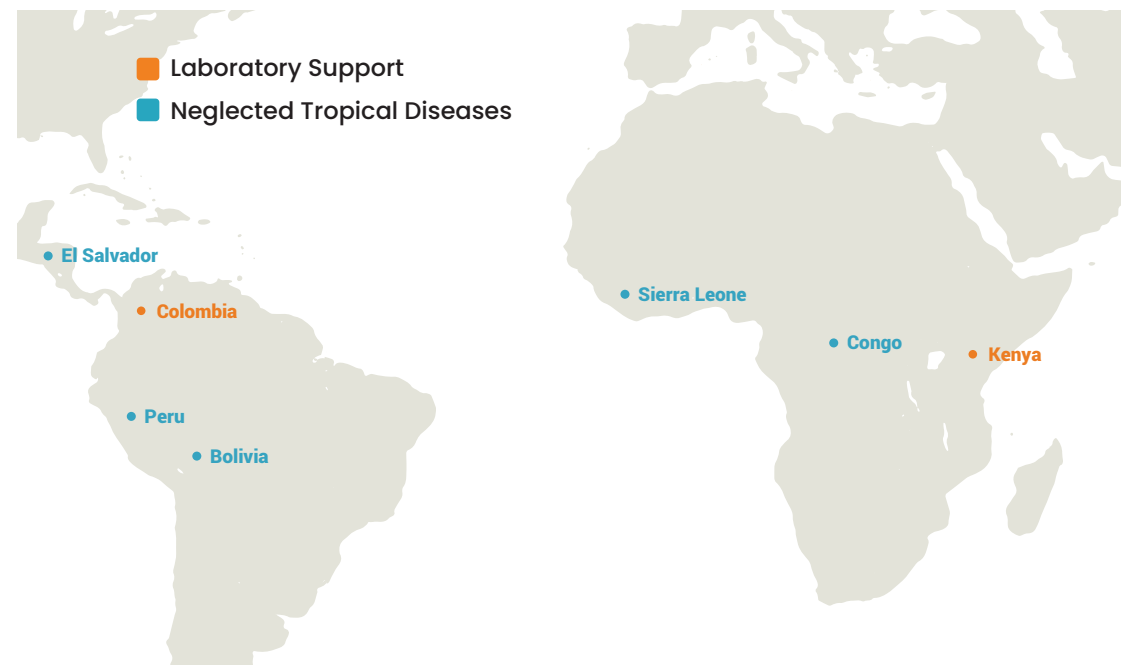

At Probitas, we are committed to equitable access to healthcare and emphasize that investing in **Universal Health Coverage (UHC)** enhances equity and social cohesion.

## Probitas initiatives to improve access to health in remote and vulnerable communities

- 🧪 Construction and improvement of laboratories
- 🎓 Training of local professionals
- 🦟 Fight against Neglected Tropical Diseases (NTDs)
- 🔬 Research, development, and innovation
- ★ Creating better opportunities

## Discover our projects around the world

# Laboratory Support

Since 2008, we have reinforced

**40** laboratories, improving access to quality diagnostics for over **1,000,000** people across 16 countries

People living in remote areas often have to travel dozens of kilometers to access quality diagnostics. Giving support for laboratories improves opportunities for the most disadvantaged populations by providing better access to healthcare services.

## What steps do we follow to strengthen a laboratory?

- Situation diagnosis: on-site visit and assessment
- Laboratory adaptation: improvement of basic infrastructure and equipment
- Training and management: capacity-building for laboratory personnel
- Community health: health education and awareness in the community
- Final evaluation: carried out 24 months after implementation

Laboratory equipment

ARIS management software

Training

📍 **Baringo, Kenya**  
🤝 **In collaboration with Kaperur**

## Laboratories in Kenya

In remote communities, many health issues go undiagnosed. Having laboratories in these areas allows affected people to be cared for and detect diseases in order to create an appropriate response plan.

This project, launched in 2023, has strengthened three laboratories in remote rural areas. The new laboratory at Chemolingot Hospital has significantly improved its diagnostic capacity and now performs an average of 1,150 tests per month. The rehabilitation of the Kolowa Health Center laboratory has also been completed.

## The Importance of Mobile Clinics

### Diagnosis, treatment, and awareness in remote areas

Mobile clinics travel to remote areas with no access to healthcare resources. Through **9 mobile clinics**, which provide diagnosis, treatment, and health education to **4,000 members of the Pokot community**, we have identified a high rate of moderate and severe acute malnutrition among children under five and pregnant women. An emergency intervention is planned for 2025 to help address this food crisis.

📍 **Chemolingot, Kenya**  
🔗 **In collaboration with the Ministry of Health of Kenya**

## End Fistula. Restore Women's Dignity

During our project in Kenya, we identified a high number of women suffering from obstetric fistulas. To improve their quality of life, we launched the "End Fistula. Restore Women's Dignity" project. The goal is to train local doctors to identify and surgically treat these obstetric fistulas.

### Surgeries and On-the-Job Training

#### Spanish volunteers perform surgeries on 15 patients in Kenya

Probitas deployed the volunteer medical team led by Dr. Jose Manuel Devesa, made up of two surgeons and a surgical nurse with extensive experience in this type of procedure. Together with the local team led by Dr. Elizabet Chebet, hospital director, they performed surgeries on 15 obstetric fistula patients, while providing hands-on training to local doctors during the operations.

📍 **Carurú and Taraira, Colombia**  
🤝 **In collaboration with Sinergias**

## Laboratories in Colombia

This region of the Colombian Amazon is home to one of the country's highest proportions of Indigenous population. Strengthening the capacity of local clinical laboratories is essential for improving the diagnosis and detection of Neglected Tropical Diseases (NTDs) and other illnesses.

The Carurú and Taraira laboratories serve a population of over 6,000 people living in extremely remote and geographically isolated conditions.

### The Reality of Isolated Communities and Access to Healthcare

#### Long journeys, air transport, and high costs

Before these laboratories were upgraded, samples had to be flown by small aircraft to San Antonio Hospital in Mitú, which involved significant costs, long delays in receiving test results, and in starting treatment. Now, thanks to the new equipment, the communities of Carurú and Taraira have access to quality diagnostics and appropriate treatments.

# ARIS Laboratory Management Software

Probitas, in collaboration with the Database Technologies and Information Management (DTIM) group at the *Universitat Politècnica de Catalunya* (UPC), has developed a software solution called ARIS (Analytical Request Information System) for managing patients, lab tests, and analytical procedures.

In 2024, pilot tests were conducted at the Chemolingot Hospital in Kenya and at Nossa Senhora da Paz Hospital in Cubal, Mozambique, with the support of a team from the Vall d'Hebron Research Institute (VHIR).

ARIS is easy to install and features a simple, intuitive interface. It is highly versatile and can be adapted to the specific needs of each laboratory.

## Key Features of ARIS Software:

- Patient management and lab test request handling
- Test processing, sample tracking, result flow and validation, with data export in encrypted and compatible formats
- Historical data management (patients and test types)
- Clinical report generation

**Request form**

# Neglected Tropical Diseases

Neglected Tropical Diseases affect over

**1** billion people

In collaboration with local organizations, we implement targeted actions to combat these diseases, which primarily affect rural and hard-to-reach regions. NTDs typically arise in areas lacking quality healthcare access and are often linked to stigma and social exclusion.

- Rehabilitate healthcare infrastructure
- Provide solutions to improve diagnostics
- Improve water, sanitation, and hygiene (WASH) services
- Train local healthcare professionals
- Carry out vector control campaigns
- Support research projects on NTDs
- Raise community awareness to prevent these diseases

Chagas, Bolivia

Echinococcosis, Perú

Leprosy, Congo

 **Bolivia**  
 **In collaboration with Fundación Nor Sud**

## Chagas

The precarious adobe homes in rural areas of the Bolivian Chaco often have cracks where the *vinchuca* — the insect responsible for transmitting Chagas disease — hides. In 2024, a housing rehabilitation campaign was completed, alongside home hygiene and prevention awareness activities reaching 950 families. This project has benefited 3,845 people across 20 communities.

### Comprehensive Fight Against Chagas in the Bolivian Chaco

- Rehabilitation of 130 rural homes to improve vector control
- Training of 59 community health promoters
- Guides developed for implementing education for health campaigns
- Hygiene and environmental cleaning campaigns
- Data collection and registration in 14 health centers
- Vector surveillance and control through 50 established Vector Information Points

### What is the *vinchuca*?

#### Surveillance and prevention of the Chagas vector

The *vinchuca* is a blood-feeding insect and one of the main vectors of Chagas disease, which can affect the heart, digestive system, and other organs. It typically hides in wall cracks and emerges at night to feed.

Peru

In collaboration with ABC Prodein

## Echinococcosis

In the Peruvian highlands, dogs roam freely through the villages, and many of them feed on the entrails of sheep infected with echinococcosis. The parasite settles in the animal's intestines and spreads through the dog's feces. As a result, the disease can be transmitted to humans, leading to the formation of cysts.

### A Comprehensive Approach to Combat the Disease

- Awareness sessions, educational videos, and community talks
- Health education workshops in schools
- Improvement of local slaughterhouses
- Deworming campaign for 800 dogs
- Ultrasound screening campaign for 288 people to detect hydatid cysts

### Children as the Best Messengers

#### Sister Martha from Prodein

Through stories and puppets, we teach schoolchildren the importance of **deworming** their dogs, **washing their hands**, and telling their parents not to feed **raw sheep offal** to dogs.

 **El Salvador**

 **In collaboration with Farmamundi**

## Leishmaniasis

Leishmaniasis is a disease transmitted by the bite of an insect similar to a mosquito. It is very important that community members know how to protect themselves and prevent the disease, while also training healthcare centers and medical staff for rapid diagnosis and effective treatment.

Thanks to the actions carried out, this project has benefited 33,084 people.

### **We reduced the number of diagnosed cases in the intervention area**

- Rehabilitation and equipping of the Santa Rosa de Lima laboratory
- Training of 37 laboratory technicians
- Training of 135 people in the healthcare sector
- Training of 48 community health promoters
- Vector control plan through selective fumigation

## Leishmaniasis can be fatal

### **Prevention and training are key to saving lives**

The project aims, at a community level, to strengthen and improve prevention and, at an institutional level, to enhance identification, diagnosis, and treatment in order to control both forms of leishmaniasis: cutaneous and visceral.

 **Democratic Republic of the Congo**  
 **In collaboration with The Leprosy Mission**

## Leprosy, “Ending the Neglect”

The “Ending the Neglect” project has significantly improved the detection, prevention, treatment, and rehabilitation for people and communities affected by neglected skin diseases such as leprosy. All of these diseases are curable if detected early.

### Actions to detect the disease and prevent its spread

- Educational sessions in 31 communities, 15 schools, and 208 settlements
- Distribution of 1,176 post-exposure prophylaxis (PEP) kits
- 1,500 people benefited

## A hopeful future

### Leprosy is curable

Khonde Ngoma Euphrasie, 34, was diagnosed with leprosy after several years without understanding the symptoms she was experiencing. “I never knew what leprosy was until it affected me and my son.” Thanks to the intervention of professionals from TLM Congo, she received an accurate diagnosis and appropriate treatment. “Today we are cured thanks to TLM Congo and Probitas,” she says gratefully.

# SEMTSI-Probitas Scholarships

In collaboration with the *Sociedad Española de Medicina Tropical y Salud Internacional* (SEMTSI), we fund two scholarships for training stays of 2 to 3 months at the Hospital Nossa Senhora da Paz in Cubal, Angola.

**In 2024, the scholarships were awarded to:**

- Alejandra de Elías Escribano
- Alejandro Mediavilla Pérez

## XIII SEMTSI Congress

### Global Child Health

In October, we attended the congress dedicated to "Global Health in Childhood."

We participated in a roundtable on the impact and control of visceral Leishmaniasis and Chagas disease in countries with high prevalence, and we presented on the prevention and comprehensive treatment of cystic echinococcosis.

# Improving Opportunities

We promote the talent and potential of people living in remote or vulnerable communities through **training**.

**34** trained people

By improving their future prospects, we support their **personal and professional development** in their country of origin.

📍 **Guatemala**

🔗 **In collaboration with Fundap and Fundación ISS**

## “Una sonrisa más” Scholarships

We launched a scholarship program for nursing assistant training for 14 young people from rural areas. The course was held at the *Escuela de Enfermería de Fundap*. After completing the course, these young people will be able to access decent employment and help meet the healthcare needs of their communities.

📍 **Saint Louis – Senegal**

🔗 **In collaboration with Ha Ha Tay**

## “Escuela de la vida”

This program offers training in traditional techniques and entrepreneurship to 20 creative young people from this rural area. The program is developed in collaboration with local artists and contributes to empowerment and the creation of economic opportunities.

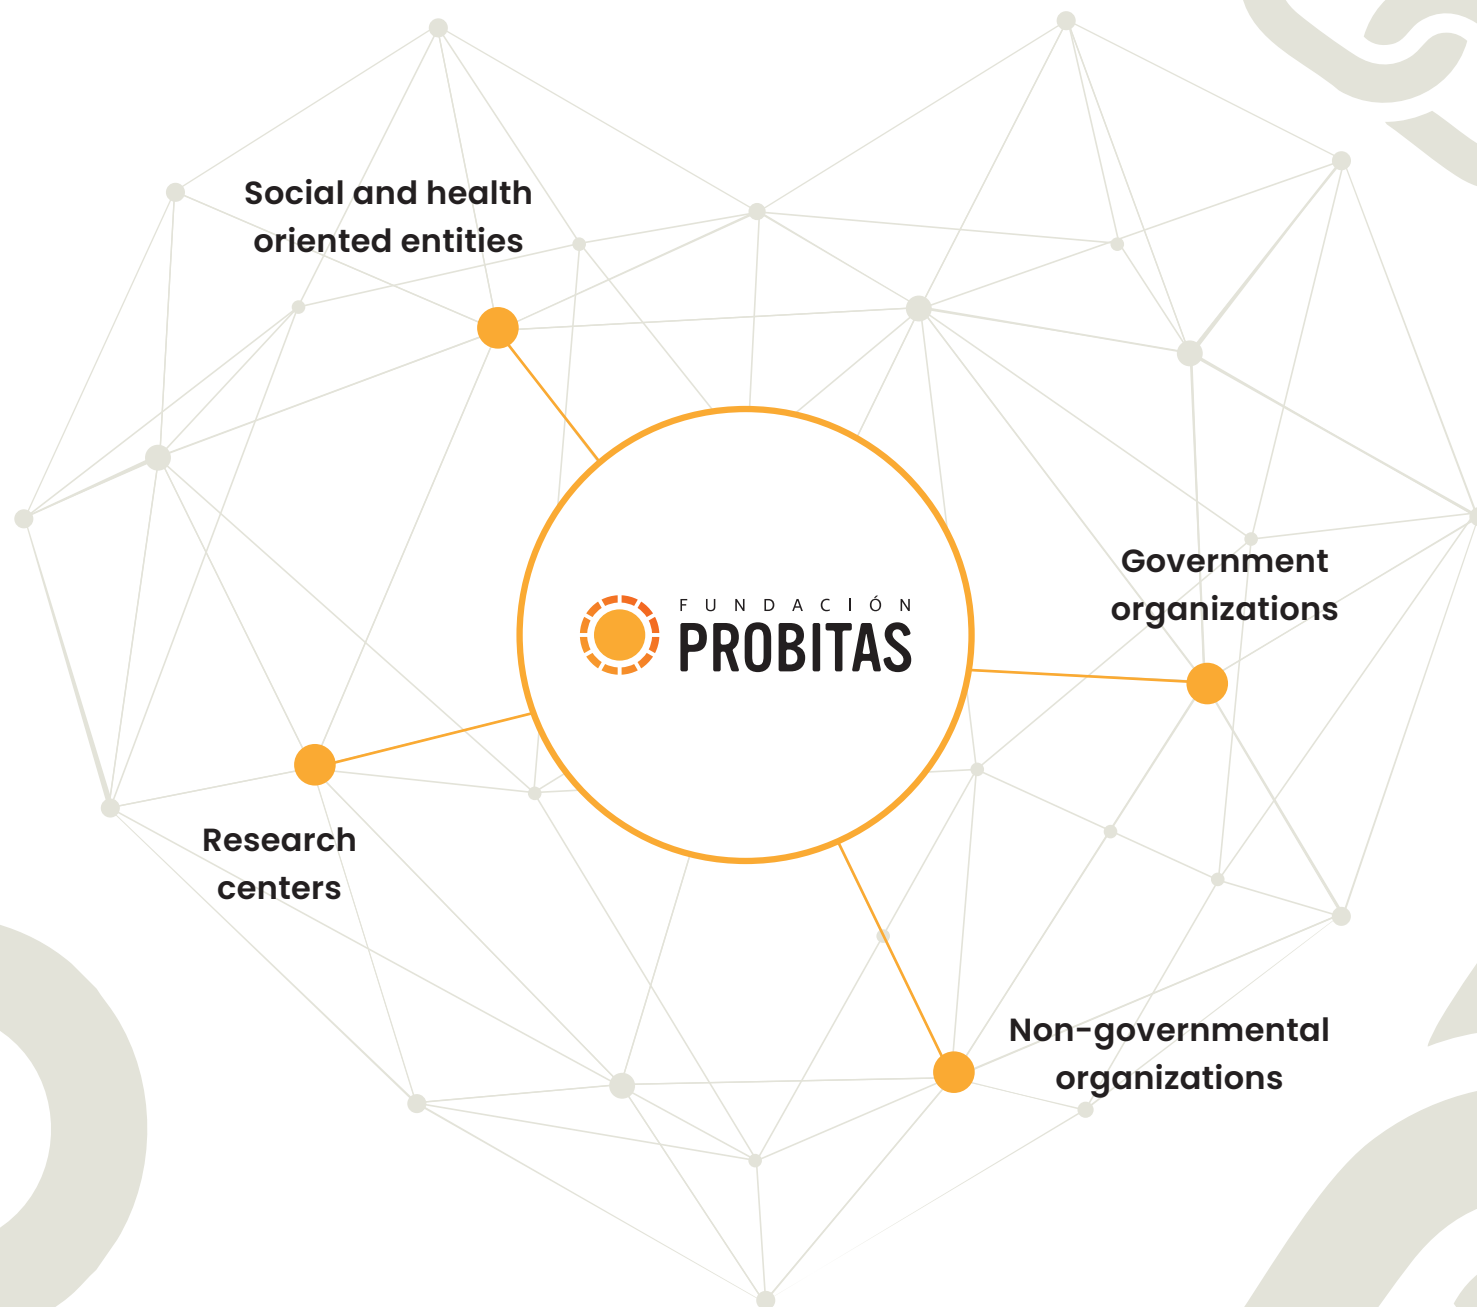

# Networks and Alliances

## We align with SDG 17 of the 2030 Agenda

We strengthen the **Global Partnership for Sustainable Development** by mobilizing and exchanging knowledge, technical capacity, technology, and resources.

At Probitas Foundation, we actively promote the **creation of alliances** to ensure the sustainability of our projects, both locally and internationally.

## Networks and Alliances
